DETAILED ACTION

Response to Arguments

- 1. Applicant's arguments filed 8 April 2008 have been fully considered but they are not persuasive.
- 2. In response to the applicant's argument that the polyethylene oxide of Ehrnsperger would preferably not have a melting point at skin temperature (i.e. from 35-40° C), it is noted that while internal body temperature falls within the range of 35-40° C, external body temperature (i.e. skin temperature) generally falls below 35° C, or 95° F. Therefore, the polyethylene oxide of Ehrnsperger would still be capable of functioning as a skin adherent with a melting point of 35° C. Further, it is noted that the composition of Ehrnsperger is soluble at 35° C, and since the polyethylene oxide is comprised in the composition, it will also be soluble at 35° to allow the composition to be soluble at that temperature.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 8, 11, and 16-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Ehrnsperger et al. (6,160,200).

Application/Control Number: 09/761,511

Art Unit: 3761

Page 3

- 5. Ehrnsperger discloses an absorbent article 20 comprising a liquid pervious topsheet 24, a backsheet 26, and an absorbent core 26, as shown in figures 1-6. A skin-protective ingredient containing layer is applied to the upper surface of the topsheet 24, as disclosed in column 6, line 64-column 7, line 17, in a predetermined pattern. The skin-protective ingredient is fully capable of forming an oily film on the skin of a wearer. A support layer 66 is formed over the skin protective ingredient containing layer, as disclosed in column 17, lines 59-62, and covers substantially the entire article, as disclosed in column 11, lines 3-5. The skin protective ingredient containing layer comprises petroleum jelly, as disclosed in column 16, lines 60-62. The support layer 66 comprises a body adhering composition formed of a polyethylene oxide, as disclosed in column 15, lines 58-67. The support layer 66 melts at a temperature threshold of 35 degrees C, as disclosed in column 13, lines 10-12. The support layer 66 is soluble in water at and above 25 degrees Celsius, as disclosed in column 10, lines 36-53 and column 13, lines 1-23. It is the examiner's position that since the support layer is soluble in water, at 100% humidity, the support layer is therefore promoted at 100% humidity, which is greater than 30% humidity. The support layer 66 is therefore capable of exposing the skin protective ingredient containing layer to the skin of a wearer after dissolving.
- 6. With respect to claim 11, the article further comprises leak-preventive cuffs 32.
- 7. With respect to claims 16 and 17, the skin-protective ingredient containing layer is located on the topsheet 24 of the article, which fits around the wearer's thighs and abdominal region.

Art Unit: 3761

Conclusion

8. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lynne Anderson whose telephone number is (571)272-4932. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tanya Zalukaeva can be reached on (571) 272-1115. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
